

Comeau Aerospace Inc. - Advanced Projects

The Ultimate Flying Machine - Design Engineering Projects

CAI-804 Aero-electric

- aero-electric propulsion experimental and applied research;
- conventional and electric propulsion;
- alternative science electro-dynamics;
- custom, limited and mass production;
- mission configured, integrated fuselage propulsion system research;
- conventional and advanced materials and production;
- energy generating and transformation technology;
- enable, augment and amplify lift, control and propulsion;
- signature and atmospheric interference reduction;
- energy field experimental and applied research and development;
- energetic grid, space time and multi-phase multi-dimensional research;
- micro and macro technology applications;
- multiple and extreme operating environments and performance parameters;
- energy field and human optimisation and environment research;
- integrated communication, command and control elements;

This is a technology research platform that has an incredible range of experimental and applied research and development options...certainly electrifying in every way...

The CAI-804 Aero-electric
