

Comeau Aerospace Inc. - Advanced Projects  
The Ultimate Flying Machine Design Engineering Projects

**CAI-806 Pegasus – the flying horse**

- the flying work horse of tactical and practical logistics;
- proposed 2, 5, 10 & 60 ton payload versions;
- air, water, ice, snow, land topography;
- hovercraft and heavy air lift tactical logistics;
- container and module options, self loading equipped and by loadmaster;
- multiple vehicle unified assembly and individual vehicle mission options;
- low profile, short, intermediate and long range, mission configured;
- conventional and advanced propulsion and energy systems;
- advanced manufacturing and multi-unit integration;
- all weather vehicle for rough terrain and varied topography;
- precision navigation and extreme communications platform;
- extreme base camp independence options;
- extreme operating environments;
- rapid mission configured and multi-purpose deployment options;

An awesome series of hovercraft/aircraft logistical capabilities

ideas, ideals and everyday mission tasking

from legendary myth and fantasy

to the transformation of thought into reality

something with heart and soul

a co-operative and industrious work ethic

transport performance you can count on

agility, power, control, simplicity and reliability

Isn't time you spread your wings and learned to fly?

Conventional and Advanced Technology, Materials and Propulsion...

Look up to the stars, there is a timeless constellation...

There is a new rising star...

**The CAI-806 Pegasus**
