

Comeau Aerospace Inc. - Advanced Projects

The Ultimate Flying Machine Design Engineering Projects

CAI-812 Acrobat-Dragonfly

- extreme maneuverability and speed;
- dragonfly concept with advanced propulsion and energy systems;
- advanced materials, durability and stamina;
- perpetual hover and motion, high speed compliance;
- advance fluid and electro dynamics experimental and applied research;
- remote and piloted multi-passenger options;
- small and large size projects with vehicle in vehicle deployment options;
- extreme invasion, multiple complex target acquisition and interception ability;
- extreme dense operating environments;
- g-force reduction and inertial compensation;
- precision flight control systems;
- electro-optical, acoustic technology and signature reduction options;
- can be augmented with CAI-811 Vector options;
- the aerial roller coaster magnitude is fantastic!

The CAI-812 Acrobat-Dragonfly
