CAI-822 Stealth Invader Interceptor

- The Avro Arrow renaissance and transformation is the CAI-822 Stealth Invader Interceptor
- Imagine the performance assets of the Avro Arrow, in a more stealthy configuration;
- an increased climb - 100,000 ft/min, Range: 1,200 miles Altitude: 250,000' – way up there...
- starting with the original engine design, full throttle in 1.6 seconds...we go forward...
- advanced materials, manufacturing and awesome engines...
- beyond Mach 3... of course at that speed it won't be very stealthy...
- cruise missiles, rockets, hypersonic and other kinetic weapons, enforced no fly zone...
- all weather interception capabilities - any day, any time, any where...all in a days work...
- there is nothing like being reincarnated to finish off your life's work at a whole new level...
- Obviously character is essential to build and deploy such a 5th generation machine...
- the people at Avro were very clever...they travelled forward and backward in time...
- if you know what soul group reincarnation is, you might have an idea...
- an alternate reality and space time continuum may be completely different and awesome...
- a few enhanced design elements from the secret vaults of time and imagination;
- super cruise is nothing new, it existed way back then...it is only a warm up...
- we will build a new machine, very fast and dedicated - it is an ultimate flying machine.
